STRUCTURAL/FOUNDATION REPAIR - STOPS FOUNDATION LEAKS

The Rhino crack injection kit was specifically developed to fill leaking cracks in poured basement walls, structures, and pools with our injection resin. This kit comes with detailed instructions and everything you need to ensure that the crack is filled with resin which bonds at a strength higher than that of the concrete itself.

CRACK INJECTION

CARBON FIBER

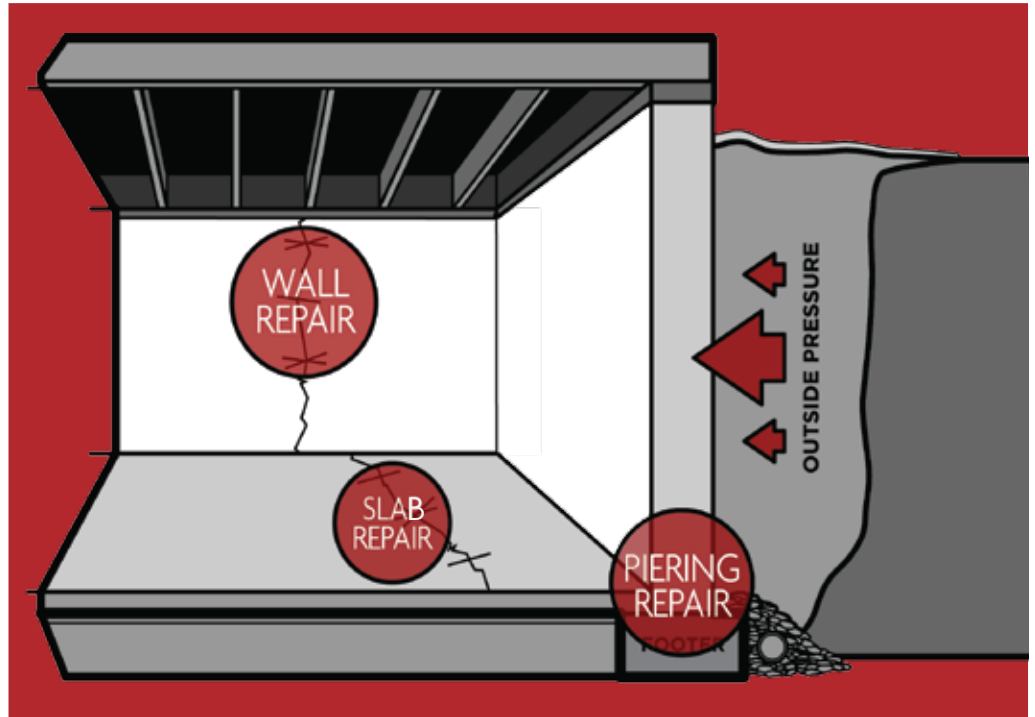

It is recommended that the Concrete Crack Lock™ be used in conjunction with the crack repairs to ensure that additional cracks do not develop.

CONCRETE CRACK LOCK™

THE CONCRETE CRACK LOCK™ IS A GREAT WAY TO FIX POURED FOUNDATION WALLS AND SLABS

The patent-pending Concrete Crack Lock™ permanently locks both sides of the crack together, preventing any further movement. Due to the shape of the Concrete Crack Lock™, the tensile strength of the carbon fiber is maximized permanently holding both sides of the crack together. The Concrete Crack Lock eliminates any potential for corrosion, warranty claims, and reduces callbacks.

OTHER CONCRETE CRACK LOCK™ USES

POUR CONCRETE WALLS

CONCRETE SLABS

POOL REPAIR

PEIRING REPAIR
